

Higher precision checks every nominated section crossing

EXP-499 | 32 realized inputs | 64 decimal trajectories | 480 root evaluations

Each point is the maximum over every nominated event (and both references for the original solvers).

Hollow markers fail a time or state comparison. L/S denote the larger/smaller dose; lines only guide the eye.

Root boxes stop at $1e-25$ time width: tiny paired differences are not absolute accuracy or a rigorous error bound.

EXP-498 verdicts stay unchanged. No C/D assignment or Jones arrow is established.
