

Flow-return curve samples: testing local fold geometry

$b = 0.2, c = 7.212$; hatching and line gaps retain unresolved brackets

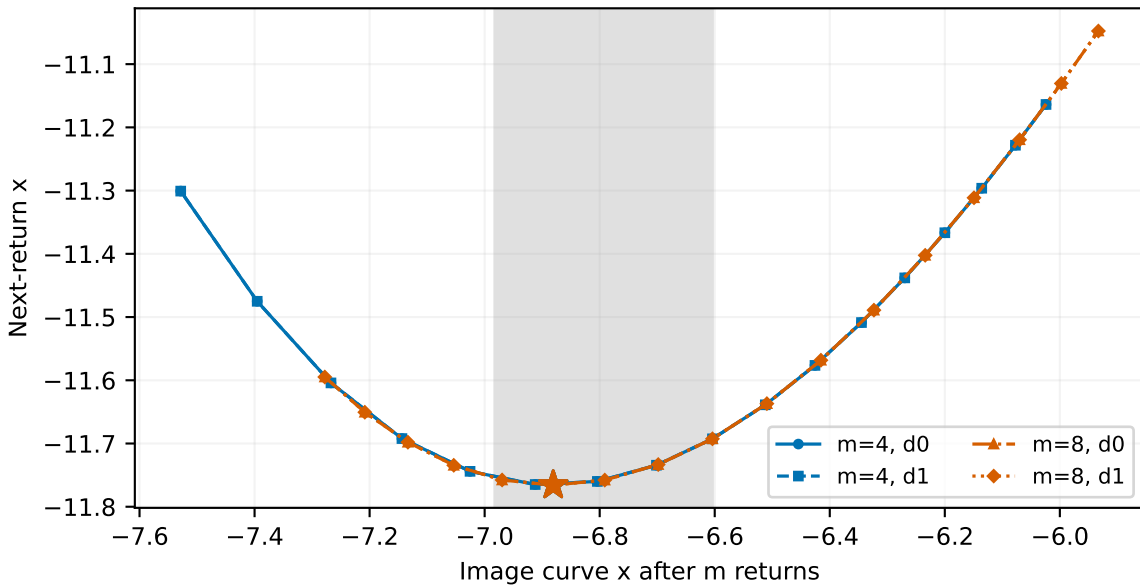

$a=0.21575$, region 1: unresolved

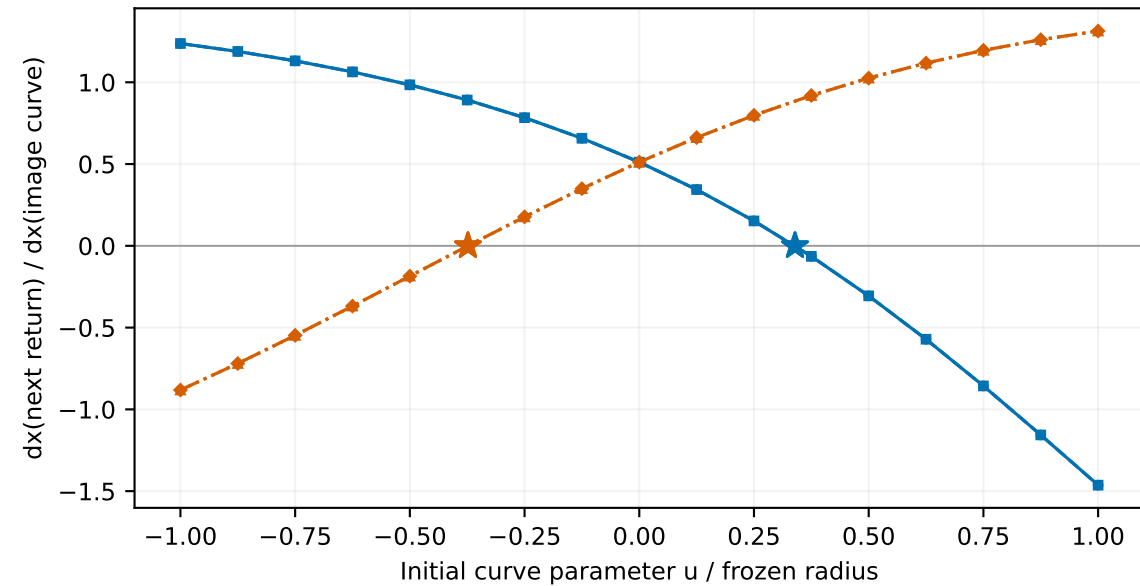

Projected derivative; 0/68 grid slopes unavailable

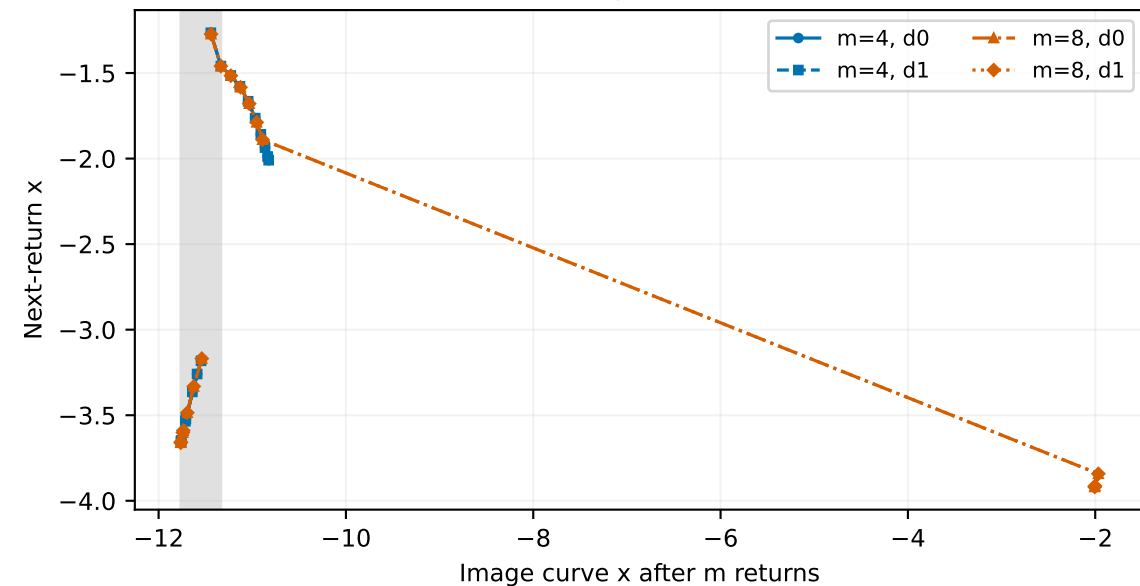

$a=0.21575$, region 2: consistent

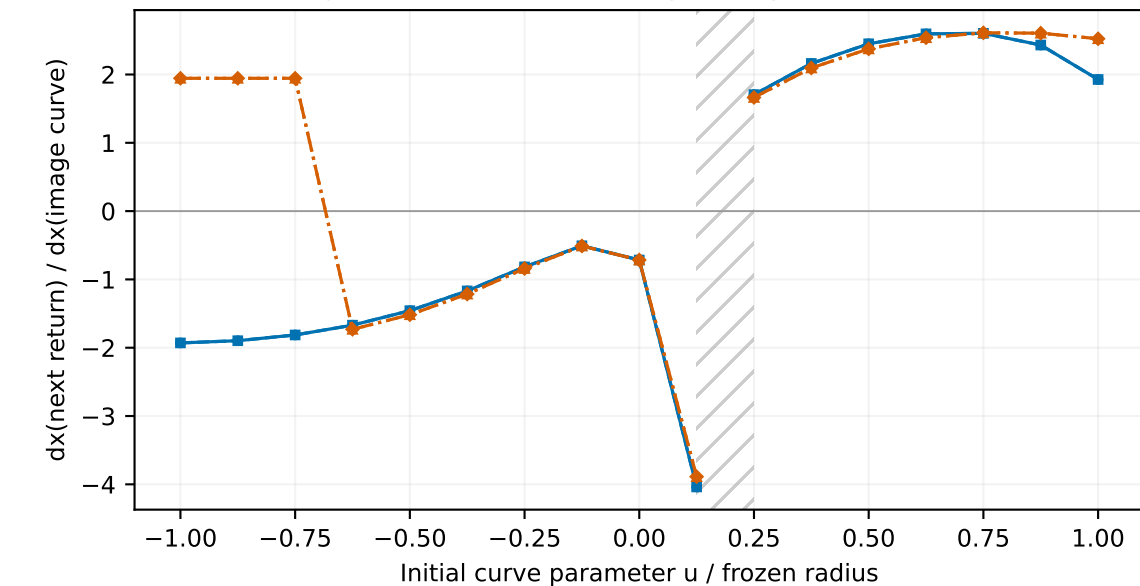

Projected derivative; 0/68 grid slopes unavailable

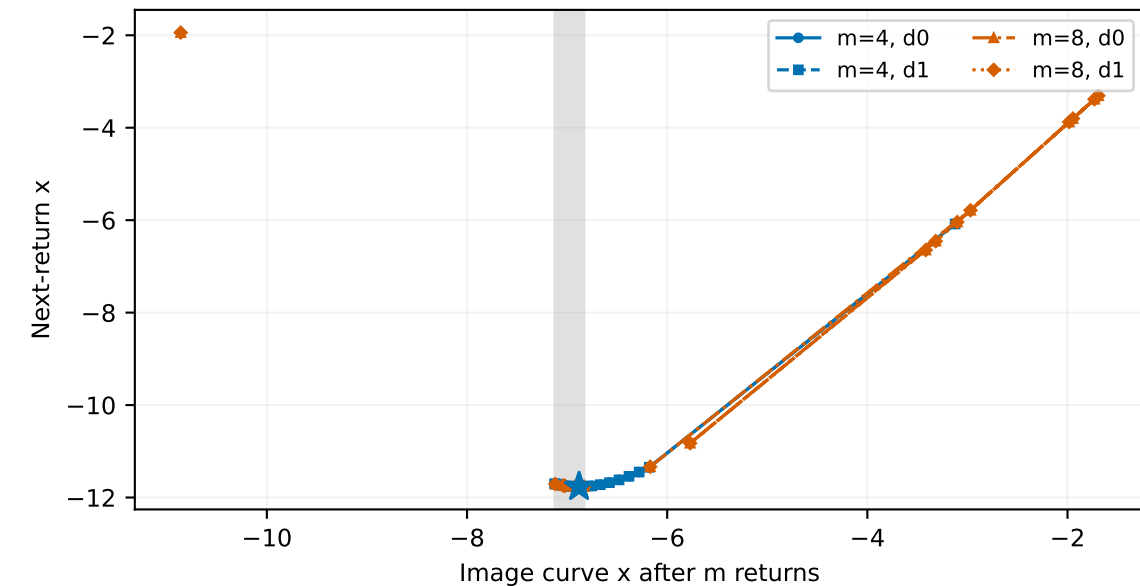

$a=0.21577$, region 1: unresolved

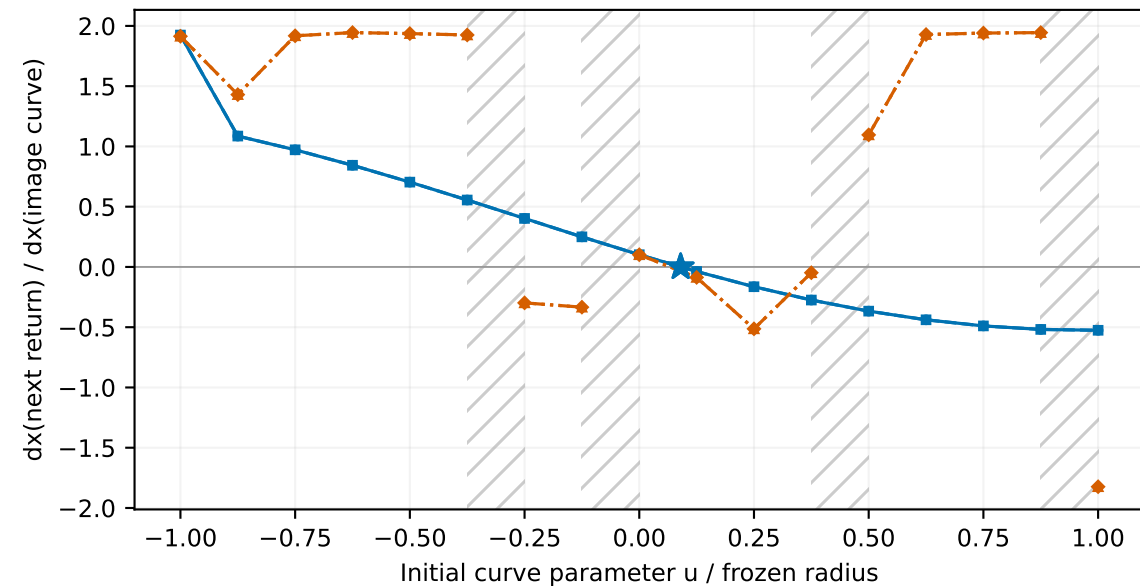

Projected derivative; 0/68 grid slopes unavailable

$a=0.21577$, region 2: unresolved

Projected derivative; 0/68 grid slopes unavailable

★ Qualified in-region root ☆ Other evaluated root × Unavailable x-graph slope
