

Testing a contact-preserving step toward periodic grazing

Measured correction fails the local gates | all prescribed stencil points retained

Correction: contact passes; fold prediction error 2.057; gap prediction error 0.003698 (prediction limit: 0.1).

A Both identified periodic maxima

Inner maximum 1 (source root 5) Inner maximum 2 (source root 13) Full-state acceptance limit

B Full fold/orbit contact, all 16 variants

Circles/squares: fixed-a data. Correction: star (maximum 1), plus (maximum 2); a also changes.

A: means and ranges of four solver/window contexts. B: complete range and worst of 16 variants.

Open/gray: unqualified geometry. Overall correction verdict also includes prediction. Ranges are not confidence intervals.

Zero in A is a section-grazing height, not a homoclinic criterion. This is not a verified Jones arrow.
